

Clinical Trial Labels

LabTAG® understands that your clinical trials team has a tremendous responsibility to meet the demands of your sponsors, patients, and doctors. With the drug development process being accelerated, and the number of clinical trials on the rise, the pressure for trials to succeed has never been higher. Increasing costs, new regulations, and mounting competition makes having the right clinical labeling in place even more of a priority. We have the demonstrated expertise and experience to fulfill any clinical trial label requirements—on time, with precision, and always hassle-free. This includes a wide range of customization options, to meet your specific needs and requirements.

Custom Label Constructs

We can produce customized labels, using our high-quality materials, in any dimension, shape, color, and configuration requested.

Custom Printing

We can provide any of our vast catalog of labels pre-printed with your desired information, reducing handling time, as they can simply be peeled and applied.

Labels with RFID Technology

We now have the ability to insert an RFID inlay into any of our durable label constructs. These labels can even be provided encoded and printed with your desired data.

Serialization & Database

We can also print your labels from a supplied database. This includes printing serialized information, variable data, and custom barcode serialization.

Full-Color Graphics

In addition to text, your labels can be provided pre-printed with full-colors graphics, images, as well as marked with company logos.
