# Histology Labels

**LabTAG®** provides labels for every step of the histological process, from tissue extraction and preparation to staining and imaging. Our xylene-resistant labels are designed to adhere to microscope slides, paraffin wax blocks, as well as plastic containers and slide boxes stored in deep-freeze conditions.

The chemical-resistant labels withstand direct exposure and immersion in xylene, toluene, alcohols, formalin, hexane, acetone, dimethyl sulfoxide (DMSO), acetonitrile (ACN), as well as other harsh chemicals and organic solvents.

**XyliTUFF™**

Extended Exposure Xylene & Chemical-Resistant Labels

- Excellent stain resistance, ideal for glass microscope slides used in histology
- Recommended for routine, as well as special staining protocols
- Resistant to xylene, toluene, hexanes, alcohols, acetone, eosin Y, hematoxylin, and the new generation of safer, non-toxic, xylene alternatives/substitutes
- Suitable for use with automated slide processors
- Compatible with all common thermal-transfer barcode printers

Removable Thermal-Transfer Labels for Microscope Slide Re-Identification

Patent Pending

Protected Design

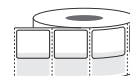

- Easy, glove-friendly label application
- Ideal for re-labeling microscope slides
- Compatible with manual and automated slide processing systems
- Fully removable without compromising the label underneath
- Printable with all common thermal-transfer barcode printers

# HistoLAM™

## Self-Laminating Thermal-Transfer Labels for Histology

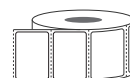

- Secure sample identification throughout the entire multi-slide processing and staining protocol (i.e. Special Stainers)
- Lamination protects printout from harsh chemicals and solvents, even during extended immersion
- Excellent stain repelling properties and thorough distribution of reagents during automated processing
- Convenient and quick integration into existing label printing systems for maximized productivity and efficiency

# ParafiTAG™

## Xylene-Resistant Labels for Paraffin Wax Blocks

- Adhere to hard-to-stick surfaces, such as paraffin-embedded tissue cassettes
- Withstand a range of temperatures (-55°C/-67°F to 70°C/158°F), suitable for use on recently cooled wax blocks
- Resistant to harsh chemicals and solvents, including xylene, toluene, hexanes, alcohols, acetone, and methyl ethyl ketone (MEK)
- Compatible with all common thermal-transfer barcode printers
